DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 2-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is unclear from the disclosure as well as the claims what the phrase "substantially form fitting" means in line 3 of claim 2. Is the applicant referring to a sloped surface having the same slope as the sieve or is a step in the same direction as the sloped surface of the sieve "substantially form fitting"?

Regarding claim 3 and 7, it is unclear if the control gap of claim 3 is the same control gap of claim 7, or is there two different control gaps? The control gap of claim 3 is connected to the throughflow opening in the throughflow regulator whereas the control gap of claim 7 is formed between the throttle body and the rising sloped surface of the throughflow regulator and is adjustable by the throttle body.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

⁽b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3752

Claims 1-3 and 7 (claims 2, 3 and 7, as well as understood) are rejected under 35 U.S.C. 102(b) as being anticipated by Muchenberger et al (5,769,326).

Muchenberger et al shows a unit for insertion into a discharge fitting comprising: a substantially cone-shaped upstream sieve (5) with a throughflow regulator (4) and a jet regulator (3) positioned downstream in a flow direction, wherein the throughflow regulator is arranged generally inside an interior space (fig 1) of the insert limited at the top by the upstream sieve. The throughflow regulator is provided with a cross-sectional profile that is substantially form fitting a cross-sectional profile of the upstream sieve (fig 1).

Regarding claims 3 and 7, the throughflow regulator has an exterior edge with a radially inward rising sloping surface (the top of the throughflow regulator where the surface steps up to substantially conform to the cross-section of the sieve (5) has a 90 degree inwardly rising sloped surface) which leads to a throughflow opening connected to a control gap (see examiners marked up figure 6 below). The control gap is also provided with a central core area which is surrounded by a throttle body and the rising sloped surface having a throughflow cross-section being adjustable by the throttle body.

Application/Control Number: 10/547,204

Art Unit: 3752

Examiners marked up figure 6

Claims 1-3 and 7 (claims 2, 3 and 7, as well as understood) are rejected under 35 U.S.C. 102(b) as being anticipated by Wildfang (4,470,546).

Wildfang shows a unit for insertion into a discharge fitting comprising: a substantially cone-shaped upstream sieve (6) with a throughflow regulator (10) and a jet regulator (8) positioned downstream in a flow direction, wherein the throughflow regulator is arranged generally inside an interior space (5) of the insert limited at the top by the upstream sieve. The throughflow regulator is provided with a cross-sectional

Art Unit: 3752

profile that is substantially form fitting a cross-sectional profile of the upstream sieve (fig 1). The throughflow regulator has an exterior edge with a radially inward rising sloping surface (13) which leads to a throughflow opening (9) connected to a control gap (a).

Regarding claim 7, the throughflow regulator is provided with a central core area (19, 23) which is surrounded by a circular throttle body (11), and between the throttle body and the rising sloped surface a control gap is formed (a) having a throughflow cross-section being adjustable by the throttle body.

Allowable Subject Matter >

Claims 4-6 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Moen (4,000,857) shows a flow control aerator including a throttle body that adjusts a control gap. Griffin et al (US 2002/0084353) shows a sloped sieve and a loped throughflow regulator.
